# AI Transaction Matching

**What's possible when transaction matching runs itself.**

How AI-powered reconciliation in Intuit Enterprise Suite **reduces month-end manual work by up to 70%.**

## The Problem

### Month-end is still manual

- Transactions matched line-by-line
- Discrepancies found too late
- Spreadsheets fill the gaps
- Close takes longer than it should

## Capabilities

### AI handles reconciliation

- Transactions matched automatically
- Discrepancies flagged in real time
- Learns from your patterns over time

## Business Value

### Your team stops doing manual cleanup

- No more chasing mismatches
- Issues caught and resolved earlier
- Finance shifts from reactive → proactive

## The Outcome

### Less manual work. Faster close.

- Up to 70% reduction in manual effort
- Faster, more predictable close cycles
- Fewer errors and rework
- More time for analysis, not admin

## Why OOTB Matters

**AI is only as good as the system it's built on.**

We can help you:

- Configure Intuit Enterprise Suite to match your workflows
- Ensure clean, connected data across systems
- Set up AI agents to actually deliver value (not noise)
- Align reporting, reconciliation, and operations
